WELCOME

Dear Friends,

I'm looking forward to this year's FIA World Endurance Championship season with great anticipation.

In 2024, we will witness an improved version of what is already one of the strongest and most enticing championships in the FIA portfolio.

This year, the revamped class structure has seen the arrival of new manufacturers. It is truly impressive to have 14 different automotive brands represented on the grid.

What is equally important is the fact that all these manufacturers will have the chance to reach new audiences owing to an enhanced and expanded calendar. This calendar grew from seven to eight rounds for this season and features a new race in Qatar as the season-opener, a welcome return to Brazil as well as new venues in Italy and the United States, with the latter of the two rounds now set to be held on a grade 1 circuit.

Now, in its fourth year, the Hypercar class features 19 cars from nine manufacturers – a result we can be proud of.

Since its introduction in 2006, GT3 has been one of the most successful customer racing platforms. Currently, there are 20 different GT3 models with valid FIA homologation and over 1,300 of these cars racing worldwide in different series. Now, the inclusion of GT3 cars to WEC marks a major milestone in the history of this class, while the variety of cars on the entry list promises a fascinating spectacle.

I also want to acknowledge the diversity and inclusivity of the WEC series. The variety of countries represented on the entry list is notable. Furthermore, WEC has a history of creating an environment where female competitors can flourish. Last year, for instance, we had two class victories for female drivers. This year, we will again have three women drivers present on the grid as part a single line-up.

I'd like to end by wishing everyone involved a successful and safe year, and all the fans an entertaining season of endurance racing.

With best wishes,

Mohammed BEN SULAYEM,
FIA President

WELCOME

Endurance reaches new heights

Last season, marked by the 24 Hours of Le Mans Centenary, was historic, and this year the WEC is back with an unprecedented grid.

The Hypercar class features nine constructors. All the greats of the automotive world are lining up to take part in an eight-round competition: Ferrari, Toyota, Cadillac, Peugeot, Porsche, Lamborghini, Alpine, BMW and Isotta Fraschini. The WEC is used to attracting exceptional competitors, but never this many at once!

The 2024 season also welcomes a new class: LMGT3. Diversity is the aim of the game for this category. Thanks to the popular platform, the championship will continue to cater for amateur drivers and an incredibly wide array of makes.

Given the overwhelming response to these two classes, we shall no longer accept LMP2 entries for the WEC. However, LMP2 remains a vital component of ACO series. In the ELMS and ALMS, LMP2 spells excellence and we shall set 15 slots aside for the class at the 24 Hours of Le Mans.

The 12th season of the WEC will be like no other. We should enjoy it to the fullest and feel grateful to be witnessing one of the most prolific periods in endurance racing history.

I wish our competitors, partners, spectators an excellent campaign and extend a special thank-you to the journalists who cover our sport with continued passion.

Pierre FILLON,
President of the Automobile Club de l'Ouest

WELCOME

We are on the verge of yet another FIA World Endurance Championship season, and I can tell you that it is going to be a fascinating year.

Over the last couple of years, the championship has been on an upward trajectory, undergoing constant evolution and going from strength to strength.

In 2021 the Hypercar class arrived, which in hindsight was probably the biggest revolution in the series' history. Without this change, the FIA World Endurance Championship would not be where it is today. Last year, we witnessed impressive figures and quality in the class, with 13 Hypercars from seven manufacturers enrolling in the full season.

This year, the class strengthened even further and, with 19 cars and nine manufacturers represented on the grid, it has reached its full potential.

With Hypercar well established, our focus shifted to ensuring good health of GT racing in the world's premier endurance racing series. As a natural consequence of the development of the Hypercar class, and the manufacturers moving to the top class, since 2023 GT racing in WEC has been restricted to Pro-Am line-ups. This resulted in a very strong LMGTE Am class, with 14 full-time entries last year.

This year, LMGT3 is replacing the much-loved GTE class that has been part of the series since day one. However, this promises even better days for GT racing in the WEC.

The GT3 platform is the FIA's most successful customer racing class if you judge by the number of manufacturers involved and the number of homologated models. The cars compared to the GTE specification are more cost-effective, are well suited to the needs of drivers of all experience levels, produce great racing, and most importantly, offer the FIA WEC great variety of makes and models.

This year we will have 18 cars from nine different manufacturers in LMGT3, which is a truly remarkable result! Overall, a staggering number of 14 manufacturers (the highest in FIA WEC history), will be represented across both classes.

Another very important development within the series is the calendar expansion. Over the last couple of seasons, WEC has enjoyed a consistent and stable calendar, but this year we will feel a breath of fresh air. The core of the calendar remains the same, but the number of rounds increased once again as we're set for eight races for the first time since the 2019–20 season.

We are returning to Brazil's Interlagos and USA's Circuit of the Americas, while Qatar's Lusail and Italy's Imola will debut on the calendar. All in all, we are having a calendar with a bit of old and a bit of new, comprised of modern world-class circuits in pretty much every corner of the globe. This gives everyone, from the competitors to the fans, something exciting to look forward to.

It is going to be a great season and I wish everyone involved and everyone interested all the best. We can consider ourselves lucky to be living through a golden era of endurance racing, so let's all enjoy the moment!

Richard MILLE,
FIA Endurance Commission President

WELCOME

The 2023 FIA WEC season was a roaring success – both on and off track. We saw return of both Ferrari and Porsche to the top class of endurance racing and witnessed record-breaking crowds at several WEC races including a sell-out audience for the Centenary celebration of the 24 Hours of Le Mans.

Since the Hypercar class was introduced in 2021, the WEC has grown immeasurably with the class reaching record numbers for the 2024 season. Also new for 2024, the WEC will consist of two classes: Hypercar and the all-new LMGTE3 category. The latter replaces the LMGTE class that has been on the WEC grid since the series' inaugural season in 2012 and is based around FIA's existing GT3 technical platform.

A staggering 14 manufacturers will be represented on the grid including Alpine, Aston Martin, BMW, Cadillac, Corvette, Ferrari, Ford, Isotta Fraschini, Lamborghini, Lexus, McLaren, Peugeot, Porsche and Toyota – all highlighting the continued growth of the world's premier endurance racing series. To have an entry list featuring 19 Hypercars plus 18 LMGTE3 entries representing 14 different manufacturers truly reflects the golden era of endurance racing that we are experiencing right now.

What's even more exciting is that we are expanding our calendar to eight races so that even more fans can enjoy the action.

Our new race in Brazil means that the WEC will visit five regions in 2024 – Europe, Asia, North America, South America and the Middle East – allowing us to reach even more fans in new territories.

The 2024 season is expected to be our biggest and best yet, we can't wait for you to join us!

Frédéric LEQUIEN,
WEC CEO

WHAT'S NEW TO THE WEC IN 2024

The 2024 FIA World Endurance Championship is set to be the strongest yet with a record-breaking 19 Hypercar entries, 18 LMGT3 cars and a total of 14 manufacturers across the two classes.

However, what else is new to the WEC in 2024? Below are some of the main changes affecting the world's premier endurance racing series for the upcoming season.

HYPERCAR CLASS

The Hypercar class continues to go from strength to strength and in 2024, there will be 19 full-time Hypercar entries (up from 13 in 2023). New manufacturers include Alpine, BMW, Isotta Fraschini and Lamborghini who join existing marques Cadillac, Ferrari, Peugeot, Porsche and Toyota.

LMGT3 CLASS

The new-for-2024 GT class will be based around FIA's existing GT3 technical platform and will focus on gentlemen drivers and private teams. LMGT3 will replace cars built to LMGTE technical regulations that have been on the WEC grid since the series' inaugural season in 2012. The cars will feature several WEC-specific adaptations such as torque sensors, luminescent number panels and leader lights. In 2024, there will be 18 LMGT3 cars on the WEC grid, including entries cars from Aston Martin, BMW, Corvette, Ferrari, Ford, Lexus, Lamborghini, McLaren and Porsche.

NEW VENUES

The 2024 WEC calendar will increase to eight rounds in 2024 (up from seven in 2023) with the addition a new race in South America. The WEC will travel to five regions in 2024 (Asia, Europe, North America, South America and the Middle East).

There will be two brand-new race venues for the WEC (Lusail in Qatar and Imola in Italy) while there will be two returning circuits (Interlagos in Brazil and COTA in the USA). The remaining four venues have been on the WEC calendar for several years [Le Mans, Spa-Francorchamps, Bahrain and Fuji].

QUALIFYING

For 2024, an enhanced qualifying format will see Hypercar and LMGT3 classes feature two sessions each. Both classes will have a 12-minute qualifying followed by a 10-minute-long Hyperpole for the top 10 qualifiers that will decide the pole position winners.

The second session is reserved for the 10 best cars from the first qualifying practice session for each category which will determine the first 10 positions on the starting grid for each category. Previously each class featured a single, 15-minute qualifying, with the Hyperpole format reserved only for round four of the WEC, the 24 Hours of Le Mans.

SAFETY CAR PROCEDURE

New for 2024, the Race Director may declare a Virtual Safety Car (VSC) if deemed necessary. Each VSC period will be systematically followed by a Safety Car procedure.

The VSC is a tool intended to secure interventions around the track in the event of an accident and can be used for an approximate duration of two laps before deployment of the Safety Car (SC).

Once VSC is displayed on the monitors, the cars must slow down to 80kph, in a single line, and maintain the distance that separates them from the car in front and the one behind. Access to the pit lane will remain open for the duration of the VSC. When the Race Director deems it appropriate, he will terminate the VSC procedure by deploying the SC procedure.

[READ THE FULL 2024 FIA WORLD ENDURANCE CHAMPIONSHIP SPORTING REGULATIONS HERE >>>](#)

HYPERCAR

The Hypercar class is the top-tier in the FIA World Endurance Championship. The cars racing in this class are high-tech purpose-built racing prototypes.

The Regulations allows for variety of technical approaches, with both hybrid or non-hybrid power units as well as both rear and four-wheel-drive layouts allowed. Relatively low aerodynamic restrictions allow the manufacturers to incorporate styling elements into their designs, therefore making their cars distinctive and easy to recognise.

The cars have a total combined power output (engine + hybrid system) of 520 kW and a minimum weight of 1030kg.

This class features cars built to one of the following sets of technical regulations:

- LMH (Le Mans Hypercar), where each of the manufacturers designs and builds their own car
- LMDh (Le Mans Daytona h), where chassis is supplied by one of the four constructors: Dallara, Ligier, Multimatic or Oreca.

All cars competing in the Hypercar class are shod with tyres from exclusive supplier, Michelin.

LMH	LMDh
Hybrid or non-hybrid	Hybrid only
Front hybrid (if installed)	Rear hybrid only
4WD (if hybrid)	Rear-wheel drive
Manufacturer specific hybrid and battery	Common hybrid system

LMGT3

WEC's new GT class is based around FIA's existing GT3 technical platform, with the focus remaining on gentlemen drivers and private teams. LMGT3 replaces cars built to LMGTE technical regulations that have been on the WEC grid since the series' inaugural season in 2012. The cars feature several WEC-specific adaptations such as luminescent number panels and leader lights.

For its inaugural season, there are 18 entries in LMGT3, including two-car teams from nine global brands (Aston Martin, BMW, Corvette, Ferrari, Ford, Lexus, Lamborghini, McLaren and Porsche).

Team WRT (BMW M4 GT3) enters the LMGT3 the fray with seven-time MotoGP World Champion Valentino Rossi named to drive the No. 46 entry. British powerhouse McLaren joins with endurance experts United Autosports to make its LMGT3 debut with a pair of McLaren 720S GT3 Evos

GT3 specialists from Akkodis ASP Team will compete with two Lexus RCF entries while Iron Lynx and Iron Dames are entered with the Lamborghini Huracan GT3 Evo2.

Highly-successful GTE Am team TF Sport aligns with 2023 champions Corvette Racing for 2024 to run a pair of Corvette Z06 GT3.R cars. Finally, there is the return of several familiar teams such as AF Corse, which is renamed as Vista AF Corse for 2024 (Ferrari 296 GT3), Heart of Racing Team and D'Station Racing (Aston Martin Vantage GT3), Proton Competition (Ford Mustang GT3) and Manthey PureRXRacing /Manthey EMA (Porsche 911 GT3 RS).

- Open paddock access for the public
- Spreading the spirit of Le Mans over 3 continents

INNOVATION

- Development of transferrable hybrid and hydrogen technologies
- Automotive industry living laboratory
- First worldwide championship to use a biofuel from 2022

TEAM SPIRIT

- Multi-class racing
- 2-3 drivers per car
- Sharing pure motorsport passion
- Experience the race, at the heart of the action

ENERGY

An innovative approach

Through WEC's Sporting and Technical Regulations, the FIA and the ACO encourage car manufacturers and teams to find energy solutions for the future: biofuels, bio-methane, hydrogen, zero emissions.

It took 40 years (1960-2000) to reduce the fuel consumption at the 24 Hours of Le Mans by 50%. The same level of economy has been accomplished again in just six years (2010-2016).

Motorsport has always pushed manufacturers to innovate. It also has allowed them to test the validity of these innovations. As such, the 24 Hours of Le Mans and the WEC hold a special place, because the search for performance is added to that of reliability.

1812 KM QATAR

24 - 25 FEBRUARY - 2 MARCH

Lusail International circuit (LIC) is a premier motorsport entertainment destination in Qatar that combines a world-class FIA Grade 1 and FIM Grand A circuit, bespoke hospitality lounges, and state-of-the-art facilities to support various action-packed international and local motorsport events.

Hosting the only Middle Eastern round of the MotoGP World Championship since 2004 following the construction of the circuit, LIC has steadily grown its portfolio of major international motorsports events and, in November 2021, welcomed Formula 1 to Doha. More recently, LIC announced that the FIA WEC will debut in Qatar as “Qatar 1812” in 2024 to 2029, meaning that all three pinnacle global motorsport events will now occur at the circuit.

Recent enhancements to the 5.148 kilometers Lusail International Circuit such as innovative technology upgrades to the race control, media, and medical centers, new pit boxes, and expanded fan areas, advance the circuit’s ambition to provide unforgettable experiences to motorsports enthusiasts.

21 APRIL

The Autodromo Internazionale Enzo e Dino Ferrari has already hosted endurance races such as Intercontinental Le Mans Cup in 2011, precursor of the WEC; and, from 2013 to 2016, the European Le Mans Series. Going even further back in time, in 1984 the Autodromo was the scene of a round of the World Sports Prototype Championship, the Imola 1000 KM.

The 2024 race is going to be unmissable due to the renewed duel between Toyota and Ferrari, but also the arrival of new Italian prestigious brands such as Lamborghini and Isotta Fraschini. An extraordinary sporting battle on one of the most iconic circuits in motorsport.

SPA FRANCORCHAMPS

11 MAY

Since 1966, legendary endurance racers have competed on the Spa-Francorchamps circuit in the Belgian Ardennes generating exciting and spectacular races. Subject to often unpredictable weather conditions, Circuit of Spa-Francorchamps is a track that thrills like no other and is a firm favourite of every driver in the world.

Technical, demanding, with challenges for drivers and strategists alike, the sight of prototypes and GT cars thundering into Eau Rouge is one never to be forgotten.

15-16 JUNE

One of the greatest and best-known spectacles in the world, and the main event on the WEC calendar: the 24 Hours of Le Mans. First run in 1923 by the Automobile Club de l'Ouest, this year's event will return to its traditional June date. It offers fans an unparalleled social and sporting occasion and competitors the opportunity to earn bonus Championship points which are key for title challenges.

Le Mans allows teams and drivers to measure themselves against their peers, with the crème-de-la-crème of driving, engineering, organisation and marketing talent displaying their skills on a stage which is recognised and followed on a global basis. With close to 1000 media attendance, broadcasts to more than 130 countries and a field of 62 entries, the event continues to surpass all others.

ROLEX 6 HOURS OF **SÃO PAULO** 14 JULY

The WEC raced at the iconic Interlagos circuit from 2012 – 2014, but this year's 6 Hours of São Paulo will mark the first time in a decade that the world's premier sportscar series has raced in Brazil. The new contract between WEC and the Mayor of São Paulo (Ricardo Nunes) will see the World Championship host a race in the city for a minimum of five editions.

At 4.3km in length, 15 turns and driven in anti-clockwise direction, the Interlagos circuit is particularly demanding for the drivers due to the gradient changes but there's also plenty of overtaking opportunities too with a long pit straight and the "Reta Oposta" back straight.

LONE STAR LE MANS

01 SEPTEMBER

Lone Star Le Mans returns to the Circuit of The Americas (COTA) on Labour Day weekend 2024 as the sixth round of WEC. COTA last appeared on the WEC calendar back in February 2020. A favourite with the drivers due to the rise and fall of the track plus fast, sweeping corners, fans will be treated to six hours of exhilarating endurance racing for the WEC's return to Texas.

The circuit was built in 2010. Despite some long straights and high-speed corners, the average speed is not extremely high due to some slow and technical sections. The track is bumpy, has plenty of elevation changes, and is extremely hard on brakes and tyres. The prime overtaking spots are turns 1 and 12.

CLASSIFICATION

SEASON 2019-2020

6 HOURS OF FUJI

15 SEPTEMBER

Endurance racing has a rich history at Fuji Speedway, dating back to 1982 when a round of the Sportscar World Championship was contested. Located at the foot of the world-famous Mount Fuji, the track was rebuilt in 2005 to a high standard, fast layout.

It first hosted a round of the World Endurance Championship back in 2012 but the championship was unable to visit in 2020 and 2021 due to the pandemic. Fans flock in their thousands to see their heroes and cheer Toyota Gazoo racing to success and the team representing the manufacturing giant has won every year so far except 2015.

BAHRAIN

04 NOVEMBER

As is tradition in the WEC, the season will end in Bahrain where the 2024 World Champions will be crowned. Situated in the desert, the Bahrain International Circuit provides a spectacular backdrop to round out the season with the added challenge of racing into the night and high temperatures in the cockpit. The circuit is demanding for the drivers, with a sandy and sometimes slippery track surface.

Moreover, the facilities are second to none and the welcome is as warm as the weather. Often the scene of dramatic races, with unexpected results, the venue is a favourite for everyone and offers fans an action-packed weekend of racing.
